

ROGA – cal KTH

A corrosion-protection product and hardness stabiliser

ROGA-cal KTH is a liquid dosage product for waste-water systems in air-conditioning and heating units. It binds the oxygen in your heating system, thereby acting as a hardness stabiliser, dispersing agent and corrosion protection.

ROGA-cal KTH is free of hydrazine and consists of environmentally friendly ingredients.

The dosage of ROGA-cal KTH is ideally regulated by means of a dosage pump in the fresh water flow, whereby the amount should be measured between 500 and 800 ml/cubic meter of fresh water. Our laboratory will undertake, at your request, an analytical control of your water trace-elements on a regular basis.

You will be able to notice stabilisation of hardness and effects of corrosion protection within a short period of time, when you implement regular dosage. Prevention must be started early. You can, in this way, avoid inconvenient and expensive repair costs.

(Come to us with your questions before it's too late!)

Rust ---- stop
Calcium ---- stop
Mud ---- stop

Please call us if you have questions or problems. We will be able to find a solution together.
